Maurice cotterell books.

Explains esoteric secrets of sacred solar science encoded in the massive army of terracotta warriors that protects the tomb of the Chinese emperor Ch'in Shi Huangdi • Decodes the farewell message of the first emperor of China hidden more than 2,000 years ago in the 8,000 terracotta warriors that protect his tomb • Displays the spiritual principles of this sacred solar science and its notable ideas in the immortal sky When the first unified emperor of China, Ch'in Shi Huangdi, felt his death approaching, decreed that he was entombed within a pyramid and that his grave was protected by an immortal army of terracotta soldiers. In 1974 archaeologists discovered the first of more than 8,000 terracotta warriors of natural size, each weighing half ton, buried near the tomb of this emperor. Maurice Cotterell shows how Shi Huangdi - like Pharaoh Tutankhamun, Mr. Maya Pacal, and Viracocha in Peru - was a guardian of the sacred solar science of the ancients, a science that included a sop... Showing 1-30 Start your review of the prophecies of Tutankhamun: The Sacred Secret of Mayas, Egyptians and Masons Feb 06, 2012 Fiona Ingram rated that the author intends to test the links between the Mayas, Egyptian culture and the secrets of the Knights Templar. His theories aim to connect Mr. Maya Pacal and the Egyptian child Tutankhamun through the decoding of artifacts, images and monuments in terms of numbers and measurements. There are also many other links, too detailed to properly describe in a test. This is a very simple picture of an incredibly complex theory. The book could have been divided into three interesting reviews of three fascinating periods of history. However, the author has a theory that, unless one accepts the premise, makes the book unbelievable. This theory is: the world was visited by five "superior gods" in the forms of Lord Krishna, Tutankhamun, Buddha, Jesus and Lord Pacal. Unless one accepts the author's theory about these spiritual leaders who are linked, and indeed being reincarnations of the one god, then the book has not much meaning. While enjoying the fantastic level of research on the Egyptians, the Mayas and the Knights Templars I cannot accept the author's theory and I felt that sometimes obsession with the achievement of numerical links (especially the number 144,000) continued and even forced at times. However, the degree of research makes the book valuable to interested readers if only for research separated from the mysteries and achievements of two magnificent and advanced cultures. I simply cannot accept the quasi-religious angle and this has diminished my enthusiasm for the content... more Mar 31, 2016 Pam rated that he liked Well, it is interesting and still worth reading. Many recurring numbers involved describing the "secret codes" of ancient Egypt/Maya that, a thousand years later, were decoded again in the Bible. But there is no secret that the world no longer knows (at least in this book). And Tutankhamun didn't die of murder, thanks to the new technology. In fact she suffered a lot as a product of incest. one in particular that could have led to its beginning it was the complication of incest. One particularly that he could have led to his early disappearance was the complication of epilepsy. The DNA also demonstrated that he is in fact Akhenaten's son... more March 28, 2012 Gregory described it, it was an excellent book excellent, excellent dishes and graphics... A differ Mr. Cotterell. It seems that the best approach to Mā is to read and reread the first, study the plates and diagrams and then read the text. I hope to read his books again, then I could say or comment with more clarity. I could comment more but I will. I will refrain. Happy reading to all. Seeing all my opinions... more Nicolas valued that Dec 02, 2012 Davraen, 2012 Mystic Toad valued it 1. For a brief fraction of second, the vaporized breath of three young farmers was all that remained of the men who, moments before, had worked together. It seemed that the field, three kilos (two miles) from Xiyang, had swallowed them, along with the drill, the trmit and several wooden cubes that were going to provide, once they had recovered from the crash of the caïda, a medium of escape. They had fallen in an old corridor, which collapsed around them, sending clouds of dust that sink to heaven up. While being cleared, they found themselves surrounded by an army of warriors in full battle; an eji © rcito of terracotta soldiers of natural size that looked, without expression, the unexpected intruders. In a few hours, the arches of the nearby city of Yanzhai came to seal the irritating eye site. Test Digs Confirmed That More than 8,000 Life-Size Terracotta Soldiers, Bury More than 2,000 It does, in about 220 B.C., filled four hidden underground chambers. Archaeologists were surprised to discover that the shapes of the faces (taken together with the shape of the head and the hairstyle) of the 8,000 soldiers corresponded to only ten forms of the Chinese alphabet of 10,516 characters. These were: Ryh, Jiah, Your, Shen, Yuung, Jih, Muh, Fehng, Tiarn and Guor. Curiously, although the official record of the Xian site provides the names of the characters, archaeologists never explained their meaning. Maybe they never thought of asking what each of the characters represented. Or maybe they knew, and they preferred not to say it. In any case, they promptly rediscovered the soldiers who had dug and concealed the test holes. Notobly was allowed near the site for almost two years, when excavation resumed, although the authorities never said why. To this day, the official site guide refuses to give the meaning of the ten Chinese characters. It's hard to see the reason for the secret. After all, Chinese-English dictionaries are available free of charge throughout the Western world. One of the best known is the author Lin Yutang; the modern Chinese-English dictionary of Lin Yutang. The Shen character, the monkey, is the ninth character of the Chinese astrological zodiac (the 12-year duodecimal cycle (2 + 10)). The Maya prophecies, the Supergods, the Tutankhamun prophecies and the lost tomb of Viracocha explained that 9 is the highest number that can be reached before becoming one (10) with God. Because of this, ancient civilizations of sun worship used the number to represent God, and the number 999 to represent a supergod, a spiritual master (the opposite to 666, the number of the beast in Revelation, in the Bible). The story of the monkey; How he had to complete 81 tasks (9 x 9) before he could reach heaven.this we can infer that the Shen character, theNumber 9, refers to God. The Secret Message of the Ten Ways of Face Bringing the dictionary definitions of the ten characters, as the ten forms of face give, we have this:

Focus the eye on soldiers in the covered tunnels. Read the meaning of national characters (girls) differently; use the mind to conjure (understand) the story that spans from the beginning of time to now; a story about the sun and God. Or, put another way: Look at the soldiers in the tunnels carefully and decode the secret history of the sun and God, from the beginning of time to now. The Pits and the WarriorsFirst, the footprint of the pit (the earth plan that shows the extent and limits of the planned excavation of the green field site) was marked with wigs in the field. Then the tunnels were excavated. The ground in each tunnel was firm with the end of the saw of the trunks before the quarry tiles were placed on the ground. Finals of trenches were framed with wood jams and dintels. The warriors, each weighing about half a ton, were ostonsibly transported by horse and kiln chariot several miles away. There they manoeuvred through the access ramps to the trench tilted towards the formation arrangement. This account, however, suggests a formidable engineering feat. When my own terracotta warrior of natural size came from the Xian museum shop, arriving at the car house showed a logistical headache. Three men were needed five hours to change the knee archer over the 100-metre trip (328 feet). The exercise required the placement of two parallel saw woods and planned in front of the soldier. The boards were soaked with water to minimize friction. The figure was then threaded from side to side, corner to corner, along the lines ne ne abatse aerat us euq otpexce ,selenªAt sol nabanecamla euq sol a odatnerfne rebah naÅbed euq sacitc;Årp sedatlucifid sal abartsuli sonem la otsE .asac al ed ortned lanif onsnaced ed ragul us a aredam 8,000 times more diffuse and the distance between the oven and the tiles many kilos by diffamile terrain instead of my own short trip on the grass. The rocking chair of my goalkeeper, from the corner to the corner, also was dangerous, with one of the corners of the base that was broken in the first attempt. This was also revealing itself, because it caught the attention, incredor, to the rear corner of the base of the goalkeeper, where one of the corners was deliberately missing. It would increase because the ancient civilizations used the same world, the emission of pieces, to attract attention to the fact that a particular artifact hidden secret information (see Apigice 3, XIX). With the formations of troops in position, the tiles were covered with pine trunks and a plaster layer spread on the top. The woven hesse type steter covered the plaster, which subsequently harden with the entrance of moisture. . . .
